

Project Initialization and Planning Phase

Date	11 July 2026
Team ID	
Project Name	Rising waters - Flood Prediction using Machine Learning
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Floods cause severe damage to lives, agriculture, and infrastructure due to the lack of timely prediction and warning systems. Existing methods are often inaccurate or rely on manual analysis. Our project aims to use Machine Learning to predict flood risk using weather and rainfall parameters, helping authorities and citizens take preventive measures in advance.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Disaster Management Authority / Local Government	Predict flood risk in advance	Existing prediction methods are slow or less accurate	Weather and rainfall data are difficult to analyze manually	More confident in taking timely preventive actions and reducing flood damage
